

Diaphragm pressure gauge for the process industry

Model 432.50, up to 10-fold overload safety, max. 40 bar

Model 432.30, safety version, up to 10-fold overload safety

WIKA data sheet PM 04.03

for further approvals, see
page 7

Applications

- For measuring locations with increased overload
- With liquid-filled case suitability for high dynamic pressure loads and vibrations (models 433.50, 433.30)
- For gaseous, liquid and aggressive media, also in aggressive environments
- With open connecting flange also suitable for contaminated and viscous media
- Process industry: Chemical industry, petrochemical industry, oil and gas, power generation, water and wastewater technology, machine building and general plant construction

Special features

- Case and wetted parts from stainless steel
- Wide choice of special materials
- High overload safety up to the 10-fold full scale value
- Process connection thread or open flange
- Scale ranges from 0 ... 16 mbar

Diaphragm pressure gauge model 432.50

Description

Diaphragm pressure gauges are preferably used for low pressure ranges. Through the large working surface of the circular, corrugated diaphragm element, small pressure ranges can be measured reliably.

The diaphragm pressure gauges are manufactured in accordance with EN 837-3. The high-quality design is particularly suitable for applications in the chemical and petrochemical industry, oil and gas industry and power engineering.

The case and wetted parts from stainless steel fulfil high requirements for resistance against aggressive media. For especially high resistance requirements, the pressure chamber can be designed with a wide variety of special materials such as PTFE, tantalum or Hastelloy.

For the measurement of highly viscous, crystallising or contaminated media, the use of an open connecting flange is recommended. The open connecting flange has the advantage over a threaded connection that the pressure port cannot become blocked. With an additional flushing bore on the open connecting flange, the pressure chamber can be easily cleaned.

Measuring systems with diaphragm elements, on the grounds of their design, offer good protection from overload, since the diaphragm can support itself against the upper flange. As standard, this diaphragm pressure gauge already features an overload safety of 5 times the full scale value. Versions with higher overload safeties can be realised on request.

Functionality

Diaphragm elements are circular, corrugated diaphragms. They are clamped together at the edge between two flanges and are subjected to the pressure on one side by the pressure in the media chamber. The resulting deflection is transmitted to the movement via the link and displayed on the dial with the instrument pointer.

Overload safety

Diaphragm elements have a relatively large actuating force and, due to the annular clamping of the element, they are less sensitive to vibration in comparison with Bourdon tubes. Diaphragm elements can be subject to higher overload of up to 10 times the full scale value, up to a max. of 40 bar, through load take-up points (by bringing the diaphragm element up against the upper measuring flange). With a scale range of 0 ... 4 bar and 10-fold overload safety, a short-term overpressure of up to 40 bar is not problematic, as the accuracy is not affected.

Versions for special media

Larger pressure ports, open connecting flanges and purging options can be integrated for measuring highly viscous, contaminated or crystallising media.

Coating / Lining of wetted parts

By selecting a coating / lining for the wetted parts, the instrument can also be used for extremely corrosive media. The materials suitable for this can either be selected for the diaphragm element only, or together with the process connection with lower measuring connection in a freely combinable manner. The selection of the material combination determines whether it is self-sealing or implemented with a sealing.

→ Available materials (wetted) see page 3

Specifications

Basic information	
Standard	
Diaphragm and capsule pressure gauges	EN 837-3
→ For information on the “Selection, installation, handling and operation of pressure gauges”, see Technical information IN 00.05.	
Nominal size (NS)	■ Ø 100 mm [4"] ■ Ø 160 mm [6"]
Window	Laminated safety glass
Case	
Design, models 432.50 and 433.50	Safety level “S1” per EN 837-1: With blow-out device
Design, models 432.30 and 433.30	Safety level “S3” per EN 837-1: With solid baffle wall and blow-out back
Material	■ Stainless steel 1.4301 (304) ■ Stainless steel 1.4571 (316 Ti)
Case filling	■ Without ■ Glycerine-water mixture ¹⁾ ■ Silicone oil M50 ¹⁾
	Instruments with case filling with compensating valve to vent case.
Movement	Stainless steel

1) Ingress protection IP65 for instruments with case filling

Measuring element	
Type of measuring element	Diaphragm element
Materials (wetted)	
Diaphragm element	■ Stainless steel 316L, for span ≤ 0.25 bar ■ NiCr alloy (Inconel), for span > 0.25 bar
Process connection with lower measuring flange	Stainless steel 316L
Coating / Lining ^{1) 2)}	■ Without ■ PTFE ■ Hastelloy ■ Monel ■ Tantalum ■ Gold (only for diaphragm element)
	Other materials on request
Sealing ³⁾	FPM/FKM

1) Diaphragm elements and process connections with lower measuring flanges can be coated / lined with various materials.

→ See page 2

2) Accuracy class 2.5 with selection of a coating / lining.

3) The selection of the material combination determines whether it is self-sealing or implemented with a sealing.

Accuracy specifications	
Accuracy class	■ 1.6 ¹⁾ ■ 2.5 ²⁾
Temperature error	On deviation from the reference conditions at the measuring system: ≤ ±0.8 % per 10 °C [≤ ±0.8 % per 18 °F] of full scale value
Reference conditions	
Ambient temperature	+20 °C [68 °F]

1) After feasibility test, if necessary, accuracy class 1.0 is possible.

2) Accuracy class 2.5 with selection of a coating / lining.

Steady	Full scale value
Fluctuating	0.9 x full scale value
Ingress protection per IEC/EN 60529	■ IP54 ■ IP65 ²⁾ ■ IP66 ³⁾ (ingress protection of the case)

1) Only selectable in combination with silicone oil case filling

2) Ingress protection IP65 for instruments with case filling

3) Hermetically sealed case; see data sheet IN 00.18

Other versions

- Version for hazardous areas (Ex h)
- Diaphragm pressure gauge with switch contacts, models PGS43.100, PGS43.160; see data sheet PV 24.03
- Diaphragm pressure gauge with output signal, models PGT43.100, PGT43.160; see data sheet PV 14.03
- Oil- and grease-free
- For oxygen, oil- and grease-free
- Silicone-free
- Per NACE ¹⁾ MR0175 / ISO 15156, use in H₂S-containing environments in oil and gas production
- Per NACE ¹⁾ MR0103 / ISO 17945, metals resistant to sulphide stress cracking
- With pre-volume deflagration flame arrester ²⁾ for connection to zone 0 (EPL Ga); model 910.21; see data sheet AC 91.02
- With flushing bore on the open connecting flange

1) General information about NACE standards, see data sheet IN 00.21

2) Only for instruments with Ex approval
